### DETAILED ACTION

This office action is a response to the after final amendment filed on 12/5/2006.

#### *Comments*

1. Since the generic claim 22 is allowable, claims 52-54, directed to the method of making an electronics module, previously restricted from the election of species, are now subject to bring rejoined. Claims 22-39 and 52-54 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 11/14/2005 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

#### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose the claimed invention such as grouping the plurality of

integrated circuits in accordance with the operating speeds, wherein the steps of assembling the electronic module comprises selecting the integrated circuits from one of the groups and wherein the selected one of the operating speeds corresponds to the one of the groups. The closest reference of Farnworth teaches a process of making a multi-chip module comprising steps of providing a plurality of integrated circuits and assembling an electronics module by demountably attaching selected ones of the plurality of integrated circuits to a module substrate follow by testing the demountably assembled module. Farnworth also teaches that if the module fails the testing, then removing at least one of the integrated circuits determined to have caused the failure from the module substrate and replacing the at least one removed integrated circuit with another of the plurality of integrated circuits, and repeating the testing step. But, if the module again fails the testing, the removing, replacing, and repeating steps. However, Farnworth teaches a process of grouping the plurality of integrated circuits in accordance with the operating speeds and fails to teach a process of assembling the electronic module with the selected integrated circuit with the selected operating speeds in the groups. It is not obvious taken alone or in combination of other references fairly to suggest the claimed invention.

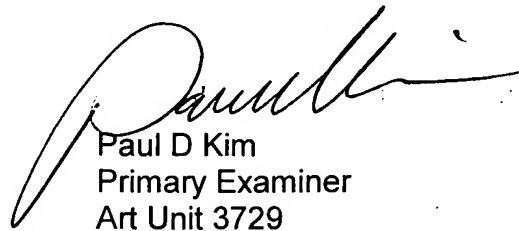

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
